A Study On L2 Loss

Abstract—This paper extends Crammer and Singer's multiclass SVM to use L2 (squared hinge) loss. Although derivations and algorithms are similar to those of using L1 hinge loss, we present all details for future references. In addition, we discuss

It considers L1 loss (hinge loss) in a complicated optimization problem. In SVM, squared hinge loss (L2 loss) is a common alternative to L1 loss, but surprisingly we have not seen any paper studying the details of Crammer and Singer's method using L2 loss. In this letter, we conduct a thorough investigation.

Where L can be any loss function (such as the cross-entropy loss function). Now, for L2 regularization we add a component that will penalize large weights. Therefore, the equation becomes: L2 regularization. Where λ is the regularization parameter.

Bahrck conducted a study where he tested 773 persons with Spanish as their L2. His probates had varying acquisition and incubation periods, up to 50 years of non-active learning. He discovered a heavy attrition within the first 5 years, which then stabilized for the next 20 years (Weltens & Cohen 1989: 130).

Unlike L2, the weights may be reduced to zero here. Hence, it is very useful when we are trying to compress our model.

Otherwise, we usually prefer L2 over it. In keras, we can directly apply regularization to any layer using the regularizers. Below is the sample code to apply L2 regularization to a Dense layer.
