Newton's Laws of Motion Notes: • Most of the material in this chapter is taken from Young and Freedman, Chapters 4 and 5 1.1 Forces and Interactions It was Isaac Newton who first introduced the concepts of mass and force, to a large extent to make sense of the experimental results obtained by previous scientists.

Chapter 1. Newton's Laws of Motion

In a previous chapter of study, the variety of ways by which motion can be described (words, graphs, diagrams, numbers, etc.) was discussed. In this unit (Newton's Laws of Motion), the ways in which motion can be explained will be discussed. Isaac Newton (a 17th century scientist) put forth a variety of laws that explain why objects move (or don't move) as they do.

3.1 Newton's First Law of Motion | Conceptual Academy

Newton's laws of motion are three physical laws that, together, laid the foundation for classical mechanics. They describe the relationship between a body and the forces acting upon it, and its motion in response to those forces. More precisely, the first law defines the force qualitatively, the second law offers a quantitative measure of the force, and the third asserts that a single isolated ...
