Though limited in functionality, CSV sharing is the simplest way to send data from Python to Tableau. This option is excellent for the presentation of historical data without the need for predicting new data on the fly. It is also suitable for single analyses that don't require on-the-fly predictions for new data.

As the saying goes, a data scientist spends 90% of their time in cleaning data and 10% in complaining about the data. Their complaints may range from data size, faulty data distributions, Null values, data randomness, systematic errors in data capture, differences between train and test sets and the list just goes on and on.
