Time Series modeling is a powerful technique that acts as a gateway to understanding and forecasting trends and patterns. But even a time series model has different facets. Most of the examples we see on the web deal with univariate time series. Unfortunately, real-world use cases don't work like that.

Multivariate Time Series | Vector Auto Regression (VAR)

One such method, which deals with time based data is Time Series Modeling. As the name suggests, it involves working on time (years, days, hours, minutes) based data, to derive hidden insights to make informed decision making. Time series models are very useful models when you have serially correlated data.

Time Series Analysis | Time Series Modeling In R

Introduction to Linear Mixed Models. This page briefly introduces linear mixed models LMMs as a method for analyzing data that are non independent, multilevel/hierarchical, longitudinal, or correlated. We focus on the general concepts and interpretation of LMMS, with less time spent on the theory and technical details. ...

Introduction to Linear Mixed Models

Analyzing our Predictive Model's Results in Excel. Implementing the linear regression model was the easy part. Now comes the tricky aspect of our analysis - interpreting the predictive model's results in Excel. In the summary, we have 3 types of output and we will cover them one-by-one: Regression statistics table; ANOVA table

Predictive Modeling in Excel | How to Create a Linear ...

Stan, rstan, and rstanarm. Stan is a general purpose probabilistic programming language for Bayesian statistical inference. It has interfaces for many popular data analysis languages including Python, MATLAB, Julia, and Stata. The R interface for Stan is called rstan and rstanarm is a front-end to rstan that allows regression models to be fit using a standard R regression model interface.
