The key ingredients are refined Strichartz type inequalities derived from Bourgain–Demeter decoupling theorem and induction on scales. This technique can also be used to obtain the state-of-art results on many other problems such as the size estimate for divergence set of Schrodinger solutions, the Falconer distance set problem and the ...

Research interests cover a wide range of topics in analysis, including harmonic analysis, partial differential equations, analysis on Lie groups and manifolds, integral geometry, wavelets and fractals. Robert's early work using methods of harmonic analysis to obtain fundamental estimates for linear wave equations has played an important role in recent developments in the theory of nonlinear wave equations.
